

AlkaPlus Installation Instructions

You have received items as per the pic at left:

1. AlkaPlus cartridge
2. Quickfit Connectors
3. Cartridge wall Mounts (optional)

1. Remove the small plastic seals from both ends of the Cartridge.
2. Push on QuickFit hose connectors.
3. Push hose into QuickFit connector.

To remove hose from connectors press on the ring surrounding the hose and pull on the hose at the same time.

These connectors will stand mains pressure.

The two Cartridge wall mounts may be attached to the wall or any local surface using appropriate fasteners for the surface you are attaching them to.

Mount them equidistant on the cartridge to provide a sturdy support.

Your AlkaPlus is installed inline either upstream of, or before the last filter in your system. It functions to alkalinize and energise the water once it has been filtered by your present water filter.

The simplest way is to turn off the water, and cut the 1/4" hose between the last filter and the faucet (if you have one). Then attach the same hose to the AlkaPlus cartridge at both ends.

Note: an arrow is embedded on the side of the cartridge to indicate flow direction.

You should expect at least 5000 litres throughput.
