

# Transforms Your Water

## AlkaWay AlkaPod Advantages:

### AlkaPod transforms your water!

- Creates a silky-smooth and sweet tasting water
- pH 7+ to 9.5 (typically increases pH by about 2 or more points)
- Low negative ORP, typically reducing the Oxygen Reduction Potential by at least 200mv, giving it strong and measureable antioxidant ability
- Abundance of activated hydrogen also supports the elimination of active oxygen (free radicals)
- Small water molecules create a very absorbable water
- Deoxidation process is visible — activated hydrogen bubbles are formed
- Contains silver ceramic and anti-bacterial balls

### AlkaWay AlkaPod is Convenient!

- Takes 8 -10 minutes to create your own energised water
- Uses only non-toxic materials (no chemical leaching as in plastic containers)
- Simple, fast cleaning

- 9 - 12 month usage based on consumption of 2 – 3 litres daily
- Portability and stylish design makes it unique, convenient, and ideal for driving, travel, office, school, hiking and anywhere you need to be on the go
- No extra maintenance cost – just replace filter when needed

### What's in Your AlkaPod?

- Tourmaline stone, which introduces a natural form of FIR to help reduce surface tension and impart a slight ionisation effect (similar to the AlkaWay water alkaliser)
- Zeolites; a rare group of minerals with a four-sided honeycomb structure and a natural, negative magnetic charge. Zeolite can absorb and retain heavy metals and toxins
- Maifanshi comes from valley streams rich in porphyritic pea gravel. Traditionally, Maifanshi has been used as a general health medicine in Asia and also for bathing, due to its ability to absorb toxins and supply many trace minerals. In the AlkaPod, Maifanshi helps to clean, remineralize and ionize the water

## Important

— please read instructions before use

1. Fill the bottle with hot water (not boiling) before you first use it in order to activate the micro-energizing minerals. Please use hot water with a temperature above 60 °C. Wait until the water cools down, then repeat by adding cold water – shake bottle then empty.
2. When not in use, store your AlkaPod in a cool dry place. The removable filter is a replacement part and also needs to be stored separately when not in regular use (it can be stored in the refrigerator).
3. When water is poured from your AlkaPod or when the bottle is shaken you may hear a rattling sound. This is simply the minerals and mineral balls moving around and is normal.
4. When putting water into your AlkaPod make sure it is filled to the top. In order to extend the filter and bottle usage, please make sure the water used in the AlkaPod is below 50°C .
5. Do not screw the lid on too tight, as energy released can increase the pressure inside the bottle.
6. After some time, there may be a mineral or scale build-up on the wall of the bottle which shows as a white film. This is nothing to be concerned about and it can be removed by using a little white vinegar or lemon juice. To extend the life of your replacement filter, soak in white vinegar for 5 minutes every 3 months and dry in sunlight.

7. You may notice small gaps on the side of the top filter through which some water will flow. This will not effect the efficiency of the alkalizer.
8. After initial use, you may experience some detoxification such as mild diarrhoea, itchy eyes or throat, a slight rash or drowsiness. These are usually normal detoxification and immune modulation responses and should clear in a few days. If symptoms persist please consult a physician.
9. The removable filter should be changed at least once every 12 months or when the performance decreases due to the volume of water processed. Replacement filters are very affordable and can be purchased through your distributor. To accurately test the pH of the water use a pH reagent not pH stix or litmus paper.
10. For a stronger water you can secure the lid gently then shake. This is usually not necessary.

## Cautions

1. In order to maintain the living energy from the internal molecular surfaces do not pour carbonated drinks, milk, coffee, tea or other similar liquids into the AlkaPod. Doing so will reduce the life of your ionizer.
2. Do not keep the water in the bottle overnight, and if you do, don't drink this water as it will become too strong.
3. Do not use in a microwave or heat up on a stove. Keep away from fire.

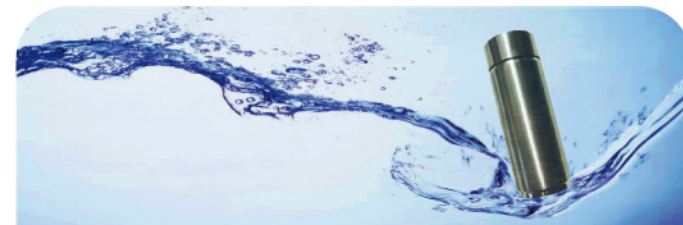

4. To avoid any possible complications do not take medication or prescription drugs with water from your AlkaPod.
5. Those with a weaker constitution are advised in the early stage of use to remove the water from the AlkaPod as soon as possible. Also it may help to mix the AlkaPod water in the beginning with ordinary water to reduce the potency.
6. Patients with weak kidneys, heart issues, liver cirrhosis, allergy or stomach problems should consult with their physician if unsure.
7. Pregnant and lactating women, please consult with your physician. Under normal circumstances, there is no need for infants or young children to use the AlkaPod.
8. If any unusual symptoms arise please stop use and consult with your physician.
